# 1. Vector Resources

---

This is a wiki for gathering and sharing information about [Anki Vector](#)

[PDF version](#)

## 1.1 Personalizing Vector

---

This is for notes on how to customize or personalize Vector. You may have to consult the How-To's below.

See also: the [forums](#)

## 1.2 Troubleshooting

---

- [What Do Vector's Back Lights Mean?](#)
- How to check for software problems
- The big long list of error codes is Appendix D of the [Technical Reference Manual](#), and in TBD

See also the [troubleshooting at DDL's site](#):

- How Do I Find Vector's Serial Number?
- Why does Vector need a 2.4 GHz network?
- Vector does not understand me: Troubleshooting Speech Recognition
- What Do Vector's Back Lights Mean?
- Why does Vector show an error?
- Troubleshooting charging issues
- Why is there no sound?

## 1.3 Service Guide

---

Collected notes on repairing or modifying Vector.

- Assembly and [exploded view diagrams](#). I am a sucker for exploded diagrams and drawings.
- How to update software
- How to clean wheels/sensors
- Where to [get parts](#) -- treads, etc.
- How to replace the battery?
- Boards?

## 1.4 How-Tos

---

These try to tell you how to accomplish particular tasks.

Some highlights:

- Using GDB [to trace function calls](#)
- Using AudioKinetic Wwise to [convert sound files to WEM format](#)
- Dauler sells stickers with the marker symbols prepimpt at (3D Designs by Dauler)[<https://designsbydauler.com/collections/vector-robot>]

## 1.5 Developer documentation

---

These are reference documentation for programming tools to use Vector. Some of them are for the remote-access SDK's.

### 1.5.1 Technical Reference Manual

---

- Details on how Vector *works*
- Main architecture of the design (not necessarily the code though) and how it works
- File system structure, files, formats and contents
- Communication protocols

### 1.5.2 Programmers Guides and Examples

---

PC/Mobile SDK (HTTPS API)

- Python Communication SDK: [Vector - Python SDK](#)
- C# Communication SDK: [Anki.Vector.SDK](#)
- C# [Anki.Vector.WebVizSDK](#) to access the WebViz related information in developer builds.
- C# [Anki.Resources.SDK](#) to access, analyze local (that is, on your computer) copies of the Vectors' application resources/assets
- See the SDK examples

Bluetooth LE implementations. There isnt an SDK for the Bluetooth LE protocol, but there are a few implementations that you might wish to look at/reuse:

- [OS-X Objective-C](#)
- [linux & C](#)
- [Chrome & Javascript](#) and [here](#)

### 1.5.3 WebViz and Console Variables

---

The developer builds of Vector's softw w

### 1.5.4 Application Notes

---

### 1.5.5 Vector Enhancement Proposals

---

These are proposals for changes -- enhancements -- to the modules on Vector.

Some highlights:

- An [overview](#) of the overall proposal process.
- VEP1. [Update-engine changes](#)
- VEP2. [Packagement for modules on Vector](#)

## 1.6 Historical Bots

---

This might a place for odds and ends info

- DVT bot info
- Whisky info
- etc

## 1.7 Stuff to help collaborate

---

### 1.7.1 Guidance

---

These provide tips/suggestions on style, naming. They are related to the "How-to's" but they don't walk you thru to a specific goal. For instance, some might describe how to do a particular style of design or implement a kind of behavior.

Examples:

- Recommendations for sound event names
- Steps that a design/process can do to meet the spec

Good title:

Bad title:

Writing guide.

- Other writer guides - Show how to do something in general, like a tutorial
- Document and show off how you built one of your projects Background: This is a note I made for myself to guide me on the right tone, help with consistency and give me some direction.

### 1.7.2 Templates

---

The document-templates folder includes some start files that can be used as templates when creating new documents:

- A template for [how to documents](#)
- A [generic template](#) for other files

## 2. Contributing

---

### 2.1 Contributing

---

We want contributing to Project Victor to be fun, enjoyable, and educational for all. We love receiving contributions from our community, all contributions are welcome, including:

- issues (bug reports),
- new documents
- updates and tweaks,
- blog posts,
- workshops
- etc

There are many ways to contribute, including submitting bug reports, improving documentation, submitting feature requests, reviewing new submissions, or contributing bits that can be incorporated into the project.

#### 2.1.1 Not sure how to start contributing?

---

If you are worried or don't know where to start, you can reach out with questions to anyone from the Project Victor team on

- [Official Anki developer forums](#)
- [Anki robots Discord chat](#)

#### 2.1.2 Pair programming

---

Other projects offer free [pair programming sessions](#) to the community. I think that might be a neat idea, if there's something others would like to work on together.....

#### 2.1.3 Code of Conduct

---

By participating in this project, you agree to abide by our [Code of Conduct](#). We expect all contributors to follow the [Code of Conduct](#) and to treat fellow humans with respect.

#### 2.1.4 Important Resources

---

The important documents and links are on the [front page of the wiki](#).

#### 2.1.5 Improving Documentation

---

If you have a suggestion for the documentation, I would recommend that you take a stab at making the changes to the documentation.

For large fixes, please build and test the documentation before submitting the pull-request to be sure you haven't accidentally introduced any layout or formatting issues.

Provide instructions on building and viewing documentation

#### 2.1.6 Contributing Code

---

This section is used to get new contributors up and running with dependencies, development, testing, style rules, formatting rules, and other things they should know.

If you have a label for beginner issues, talk about that here so they know where to look:

Unsure where to begin contributing to Atom? You can start by looking through these beginner and help-wanted issues: Beginner issues - issues which should only require a few lines of code, and a test or two. Help wanted issues - issues which should be a bit more involved than beginner issues.

Working on your first open source project or pull request? Here are some helpful tutorials:

- [How to Contribute to an Open Source Project on GitHub](#)
- [Make a Pull Request](#)
- [First Timers Only](#)

## Getting Started

Install these dependencies:

```
with some examples
```

Provide some instructions for your workflow (e.g. fork the repository)

You will need to fork the main repository to work on your changes. Simply navigate to our GitHub page and click the "Fork" button at the top. Once you've forked the repository, you can clone your new repository and start making edits.

In git it is best to isolate each topic or feature into a "topic branch". While individual commits allow you control over how small individual changes are made to the code, branches are a great way to group a set of commits all related to one feature together, or to isolate different efforts when you might be working on multiple topics at the same time.

While it takes some experience to get the right feel about how to break up commits, a topic branch should be limited in scope to a single issue

```
# Checkout the master branch - you want your new branch to come from master
git checkout master

# Create a new branch named newfeature (give your branch its own simple informative name)
git branch newfeature

# Switch to your new branch
git checkout newfeature
```

For more information on the GitHub fork and pull-request processes, [please see this helpful guide](#).

## Finding an Issue

The list of outstanding feature requests and bugs can be found on our [GitHub issue tracker](#). Pick an unassigned issue that you think you can accomplish and add a comment that you are attempting to do it.

Provide notes on different kinds of issues or labels

`starter` labeled issues are deemed to be good low-hanging fruit for newcomers to the project `help-wanted` labeled issues may be more difficult than `starter` and may include new feature development `doc` labeled issues must only touch content in the `docs` folder.

## Style Guidelines

If your code has any style guidelines, add them here or provide links to relevant documents. If you have an automated checker, make sure to provide instructions on how to run it.

## Whitespace Cleanup

Don't mix code changes with whitespace cleanup! If you are fixing whitespace, include those changes separately from your code changes. If your request is unreadable due to whitespace changes, it will be rejected.

Please submit whitespace cleanups in a separate pull request.

## 2.1.7 Pull Request Process

Do you have any labelling conventions?

Add notes for pushing your branch:

When you are ready to generate a pull request, either for preliminary review, or for consideration of merging into the project you must first push your local topic branch back up to GitHub:

```
git push origin newfeature
```

Include a note about submitting the PR:

Once you've committed and pushed all of your changes to GitHub, go to the page for your fork on GitHub, select your development branch, and click the pull request button. If you need to make any adjustments to your pull request, just push the updates to your branch. Your pull request will automatically track the changes on your development branch and update.

1. Ensure any install or build dependencies are removed before the end of the layer when doing a build.
2. You may merge the Pull Request in once you have the sign-off of two other developers, or if you do not have permission to do that, you may request the second reviewer to merge it for you.

### Review Process

The process is likely to be lite for many changes.

Many pull requests are likely to open for several days, until the core team can apporve them in Github. In some cases, multiple people will have the chance to review/comment.

### Addressing Feedback

Once a PR has been submitted, your changes will be reviewed and constructive feedback may be provided. Feedback isn't meant as an attack, but to help make sure the highest-quality code makes it into our project. Changes will be approved once required feedback has been addressed.

If a maintainer asks you to "rebase" your PR, they're saying that a lot of files has changed, and that you need to update your fork so it's easier to merge.

To update your forked repository, follow these steps:

```
# Fetch upstream master and merge with your repo's master branch
git fetch upstream
git checkout master
git merge upstream/master

# If there were any new commits, rebase your development branch
git checkout newfeature
git rebase master
```

If too much code has changed for git to automatically apply your branches changes to the new master, you will need to manually resolve the merge conflicts yourself.

Once your new branch has no conflicts and works correctly, you can override your old branch using this command:

```
git push -f
```

Note that this will overwrite the old branch on the server, so make sure you are happy with your changes first!

## 2.1.8 How people can contribute

- You can help us answer questions our users have
- You can help build and design our website
- You can help clean up our existing documentation, polishing it and so on
- You can help create new documentation

- Create an example of some changes / fixes/ hacks

## 2.2 Contributor Covenant Code of Conduct

---

### 2.2.1 Our Pledge

We as members, contributors, and leaders pledge to make participation in our community a harassment-free experience for everyone, regardless of age, body size, visible or invisible disability, ethnicity, sex characteristics, gender identity and expression, level of experience, education, socio-economic status, nationality, personal appearance, race, religion, or sexual identity and orientation.

We pledge to act and interact in ways that contribute to an open, welcoming, diverse, inclusive, and healthy community.

### 2.2.2 Our Standards

Examples of behavior that contributes to a positive environment for our community include:

- Demonstrating empathy and kindness toward other people
- Being respectful of differing opinions, viewpoints, and experiences
- Giving and gracefully accepting constructive feedback
- Accepting responsibility and apologizing to those affected by our mistakes, and learning from the experience
- Focusing on what is best not just for us as individuals, but for the overall community

Examples of unacceptable behavior include:

- The use of sexualized language or imagery, and sexual attention or advances of any kind
- Trolling, insulting or derogatory comments, and personal or political attacks
- Public or private harassment
- Publishing others' private information, such as a physical or email address, without their explicit permission
- Other conduct which could reasonably be considered inappropriate in a professional setting

### 2.2.3 Enforcement Responsibilities

Community leaders are responsible for clarifying and enforcing our standards of acceptable behavior and will take appropriate and fair corrective action in response to any behavior that they deem inappropriate, threatening, offensive, or harmful.

Community leaders have the right and responsibility to remove, edit, or reject comments, commits, code, wiki edits, issues, and other contributions that are not aligned to this Code of Conduct, and will communicate reasons for moderation decisions when appropriate.

### 2.2.4 Scope

This Code of Conduct applies within all community spaces, and also applies when an individual is officially representing the community in public spaces. Examples of representing our community include using an official e-mail address, posting via an official social media account, or acting as an appointed representative at an online or offline event.

### 2.2.5 Enforcement

Instances of abusive, harassing, or otherwise unacceptable behavior may be reported to the community leaders responsible for enforcement at [INSERT CONTACT METHOD]. All complaints will be reviewed and investigated promptly and fairly.

All community leaders are obligated to respect the privacy and security of the reporter of any incident.

### 2.2.6 Enforcement Guidelines

Community leaders will follow these Community Impact Guidelines in determining the consequences for any action they deem in violation of this Code of Conduct:

## 1. Correction

**Community Impact:** Use of inappropriate language or other behavior deemed unprofessional or unwelcome in the community.

**Consequence:** A private, written warning from community leaders, providing clarity around the nature of the violation and an explanation of why the behavior was inappropriate. A public apology may be requested.

## 2. Warning

**Community Impact:** A violation through a single incident or series of actions.

**Consequence:** A warning with consequences for continued behavior. No interaction with the people involved, including unsolicited interaction with those enforcing the Code of Conduct, for a specified period of time. This includes avoiding interactions in community spaces as well as external channels like social media. Violating these terms may lead to a temporary or permanent ban.

## 3. Temporary Ban

**Community Impact:** A serious violation of community standards, including sustained inappropriate behavior.

**Consequence:** A temporary ban from any sort of interaction or public communication with the community for a specified period of time. No public or private interaction with the people involved, including unsolicited interaction with those enforcing the Code of Conduct, is allowed during this period. Violating these terms may lead to a permanent ban.

## 4. Permanent Ban

**Community Impact:** Demonstrating a pattern of violation of community standards, including sustained inappropriate behavior, harassment of an individual, or aggression toward or disparagement of classes of individuals.

**Consequence:** A permanent ban from any sort of public interaction within the community.

## 2.2.7 Attribution

This Code of Conduct is adapted from the [Contributor Covenant](https://www.contributor-covenant.org/version/2/0/code_of_conduct.html), version 2.0, available at [https://www.contributor-covenant.org/version/2/0/code\\_of\\_conduct.html](https://www.contributor-covenant.org/version/2/0/code_of_conduct.html).

Community Impact Guidelines were inspired by [Mozilla's code of conduct enforcement ladder](#).

For answers to common questions about this code of conduct, see the FAQ at <https://www.contributor-covenant.org/faq>. Translations are available at <https://www.contributor-covenant.org/translations>.

## 3. Customization

---

### 3.1 Customization

---

This is for notes on how to customize or personalize Vector.

See also: the [forums](#)

It might be thru configuring the software and files:

- Sounds
- Body movements
- Eyes
- Colors?
- PNGs on face
- Backpack lights
- Cube lights
- Other custom animations

Or it might be physical changes, and tweaks that are distinctive and identify

.. Link to a showcase ..?

#### 3.1.1 Customizing animations

---

- animation of eyes
- body movements
- boot animation

People would love tools to gen the animation file... but I suspect that may be hard. The presentations made it sound like it was a lot of Maya rigging and plugins for the export.. but since Maya is expensive, and hard..

Maybe a Unity model tool could be made with a rigged model of Vector? and such for I suspect the value vs effort isn't there for such a specialized area, but who knows?

Tools for generating animation files.

What about mixing-matching existing animations, and adjusting them slightly?

#### 3.1.2 Sounds

## 4. Document templates

---

### 4.1 VEP Template

---

```
---
title: VEP123 - The name of the VEP (only a few words)
summary: An optional description of the proposal, if the title is too short
authors:
  - Author Name
date: 2022-07-10
---
```

(remove the quotes; they are so that the template is readable)

#### 4.1.1 Description of the changes

---

Motivation: A synopsis of why this should be done -- we don't want complicated goo-gaws for the sake of it.

#### 4.1.2 Some Design decisions

---

Optional

#### 4.1.3 Documentation

---

The documentation (if short) or where can the documentation be found

#### 4.1.4 Cavaets

Summary of changes to help the reader

## 4.2 How-to template

---

{Choose a good title name for the file. It should lead with what it noun or action is, and follow the pattern of other documents in this section}

### 4.2.1 References and Resources

---

**Optional** Include some some links to other resources here.

## 4.3 Template

---

{Choose a good title name for the file. It should lead with what it noun or action is, and follow the pattern of other documents in this section}

### 4.3.1 References and Resources

---

**Optional** Include some some links to other resources here.

## 5. How to

---

### 5.1 How to trace calls using GDB

---

Vector's command line tools do not include a `ptrace` (as far as I can see). This can be emulated with GDB. Here is an example tracing a `write()` call.

1. Start `gdb` and attach to the process of interest.
2. Add the following scripted breakpoints:

```
break write
command
silent
printf "%d bytes\n", $r2
x/80c $r1
continue
end
```

```
set pagination off
```

## 5.2 How to convert animation bin files to JSON

---

The animation binary files are based on Google's flatbuffers using a binary format. Fortunately it is easy to read, since Anki left the description file in the Vector software, and it is an evolution of what was used in Cozmo.

The files can be turned into JSON, and then back. Google's tools will do this for you, see ["Using flatc as a JSON Conversion Tool"](#)

You can also turn the JSON file back into a binary file using the same tool.

### 5.2.1 Developer Animation JSON files

---

The developer releases of Vector software includes animation JSON files. These are the equivalent to animation binaries, but in JSON format. The developer software -- and perhaps the production software as well -- can read the animation in the JSON form.

## 5.3 How to use Cozmo animation files

---

Cozmo's animation .bin files can be used on Vector, mostly. You do need know how to trigger them.

### 5.3.1 Why does this even work?

---

Cozmo's animation schema is very similar to Vector's.

When Vector reads and interprets the animation file it uses the flatbuffers library. This library uses default values for fields that are missing in a file — fields that Vector uses but that the Cozmo animation files doesn't provide. And the library ignores fields in the file that it doesn't know about — fields that Cozmo uses but Vector doesn't. So that gives it a lot of compatibility for faces, lights, motions.

Where Vector completely ignores Cozmo features is the sound. The sound features in the animation files is completely different between the two. (If cozmos sounds tracks work without fuss, Id be surprised ... or maybe they have a Cozmo compatibility layer?)

### 5.3.2 How to get a Cozmo animation file

---

### 5.3.3 How to put it on Vector

---

- Include how to link it into the behavior or what not

### 5.3.4 What about fixing up the audio stuff?

---

A bit of background the animation files send audio events, or audio trigger names (plus some audio parameter adjustments) that are used to tell the audio engine to play a particular sound.

You will have to convert the animation to JSON Then edit them to the new schema and change the audio trigger name to one that Vector supports. Then repack it into an animation bin file.

## 5.4 Making paper dolls for Vector to play with

---

### 5.4.1 Laser Printer Version

---

1. Download one of the two version of the pattern template:
  - Without the symbols: [PDF](#) or [Visio](#)
  - One includes little symbols on them
  - The other doesn't (You can add the pictures using stickers)
2. Make any changes, like adding color patters (Optional)
3. Print. If you're like me, the printer doesn't like card stock
4. Cut out
5. Use a glue, like a spray glue, to attach to cardstock
6. Cut that.
7. Color it in (Optional)
8. Add little tails so it will stay upright

## 5.4.2 Cricut Version

---

1. Download one of the two version of the pattern template:
  - Without the symbols: [PDF](#) or [Visio](#)
  - One includes little symbols on them
  - The other doesn't (You can add the pictures using stickers)
  - One has the cut pattern
  - Two have the print patterns. Pick one.
2. Make any changes, like adding color patters (Optional)
3. Use Cricut, print-then-cut mode
  - Print
  - Cut out
  - Cut out card stock
4. Print on cardstock? If you're like me, the printer doesn't like card stock
5. Use a glue, like a spray glue, to attach to cardstock
6. Color it in (Optional)
7. Add little tails so it will stay upright

## 5.5 Using AudioKinetic Wwise to convert the sound files to WEM

---

This is not an easy tool to use, or export from. First download and install AudioKinetic Wwise.

### 5.5.1 Importing

---

1. Project>Import Audio files [image]
2. Click "Add Files" button
3. Select files
4. Click "Open"
5. Click "Import"

### 5.5.2 Settings.

---

How to get setting.

1. I went to search, typed name
2. On the popup of the files, Right Click
3. Select "Edit"
4. Click "Conversion" tab
5. Click "Edit" button
6. Scrolled until the Format is visible
7. Change this to "Vorbis" {The other items may warrant tweeking, but I don't know about them yet.}

### 5.5.3 Converting and exporting

---

1. Project >> Convert All Audio Files
2. Click "Ok"
3. Todo: steps to find the WEM files
4. Todo: steps to replace the one on vector

### 5.5.4 Issues

---

The soundbank may be too large.

- Wwise, free version, has a cap of 200 audio files max
- Break the soundbanks up so that people can modify the free tools
- The tool is hard to use.

# 6. Service

## 6.1 Exploded View

### 6.1.1 Exploded Views of Vector's assembly

Zoom in on the exploded view of head

An exploded view of backpack assembly

## 6.2 Parts kits

---

- Replacement Parts: Wheel hubs, wheels, treads, lift arms, body boards, back pack boards, ears, gears, etc.
- Dauler sells treads at [3D Designs by Dauler](#)

### Replacement boards

- Body boards
- Time of flight boards
- LCD module
- Motor encoder
- Backpack boards

Modifying board firmware:

- Mechanism to sign new body board FW?

### 6.2.1 Playpen

---

Method to recalibrate bots at home? - Body board FW with playpen/factory interface?

(Is that even practical?)

## 7.3 Console variables

### 7.3.1 Console Variables

Console Variables are part of the developer build. They allow the developer to test, diagnose, and tweak (inject data into) the various modules.

This note is to help gather a description of each of console variables. This format lets us gather information on them, and help understand where they fit in.

These tables are not suitable for the TRM at this time; they may go better in the software design description in the future.

Note: the k seems to be dropped or optional in matching

#### A/B Testing console variables

Variable	Type	Units	Description

## 7.4 Channels

---

I'm not sure what these are. They may be part of the logging of information and routing it internally and to a log file.

This note is to help gather a description of each of the channels. This format lets us gather information on them, and help understand where they fit in.

## 7.5 Software Classes

---

Vector's software has a lot of modules -- I'm assuming these are C++ classes. They are not all annotated or understood. Here are some that we've spotted:

Module	Description
AIComponent	
AIWhiteboard	
AccountSettingsManager	
ActionList	
ActionQueue

## 8. Troubleshooting

### 8.1 Backpack Lights

## VECTOR LED SUMMARY

LEDs	Animation	What it means
	The small circular light glows a steady green.	Vector is on.
	The rectangular lights glow green and climb up his Back button.	<b>Charging:</b> Vector is getting more energy. When he's done, his rectangular lights will stop glowing.
	The rectangular lights glow light blue and climb up his Back button 1 then 2 then 3.	<b>Booting:</b> Vector is starting up. When he's done, these rectangular lights will stop glowing light blue.
	The rectangular lights glow solid blue.	<b>Speaking to Vector:</b> After you've said "Hey Vector", Vector is ready to hear what you have to say.

## 9. Vector enhancement proposals

### 9.1 Vector Enhancement Proposals

---

Memos, cheekily named for Python's memo system. At the moment, I see these as proposals for changes to the software and files on a Vector. (Proposals for changes to the site or documentation, or build tools, etc should go elsewhere.)

This would be relevant for changes, esp substantial changes, that you might like many people to adopt.

File Format:

- I'm going to try to use markdown most often, but
- PDF/HTML export for normal human readers

Common elements, to make it easier to read and management them:

The first part is the markdown front matter: it begins and ends with --- and the lines inside contain YAML. This lets other tools extract the basics.

```
---
title: VEP123 - The name of the VEP (only a few words)
summary: An ptional description of the proposal, if the title is too short
authors:
  - Author Name
date: 2022-07-10
---
```

The title starts with "VEP" and a unique (serial) number. It is followed by a brief description or topic of the proposal. The other fields are self explanatory, and helps track the info

Other outline, organization:

- Description of the changes
- Some Design decisions
- Documentation
- Cavaets
- Status
- References
- Change history synopsis (this is for people)

## 9.2 VEP1 - Update-engine changes

---

**Summary:** Update-engine changes to make for unsigned, incremental updates; and to reduce the number of partitions modified.

**Authors:** Randall Maas

### 9.2.1 Description of the changes

---

Motivation: Building a new, experimental development release is not possible with an stock update-engine:

1. We can't create an OTA file for unmodified production, development and OSKR bots, as it needs to be signed in order for the update-engine to apply it.
2. The OTA update is very "heavy weight" -- it needs to update the boot and system files systems (with a 200+MB file!) just to change a couple of files.

This enhancement changes the following to the update engine:

- remove signing check of the manifest, update files
- Allows replacing individual partitions, esp just the system file system; usually it replaces several at a time
- Allows using tar to update the contents of the system file system
- This is not recommended since it doesn't get the permissions right

### 9.2.2 Documentation

---

- none at this time

### 9.2.3 Cavaets

---

- the tar based updating of the system file system doesn't always work as expected, since the busybox tar doesn't preserve permissions
- it is tricky to create a tar file
- there is no undo for a partial update
- this probably doesn't disable delta updates properly, so if a delta update were to be issued, we'd need a way to make sure it doesn't mess up the FS.

### 9.2.4 Status

---

- it works well (except the system fs file-only changes), I believe that Wire has used this or a modified version
- I am considering other changes to support package-based updates to the file system, to better address the above issues.

## 9.3 VEP2 - Package management for modules on Vector

---

**Summary:** Supports installing and uninstalling packages/modules on Vector

**Authors:** Randall Maas

### 9.3.1 Description of the changes

---

Motivation: We needed a way to package changes to a few files on an already deployed system, to ensure that the permissions are correct on the files (usually executable), and some restrictions/protections from screwing up system files. (Ie, don't force it to be unbootable)

This is a package manager that does those, and adds in a few extras:

- It allows modifying parts of a file, usually the version identifier of the system, so we know what we're working with.
- Lists the installed packages
- Can uninstall packages
- Can set the premissions for the files.

### 9.3.2 Some Design decisions:

---

- The tool had to be small, and not hard to deploy
- The tool can't be compiled (we don't know how)
- It had to be based on tools already on Vector: python 2.7, and busybox based utils. Busybox supplies the shell, and tar... except tar doesn't support preserving permissions.
- It is preferred to separate out the package manager from the update-engine as much as possible, to make int more understandable and support testing.

#### It just installs the packages

This tool doesn't do everything that the other managers do:

- It doesn't check dependencies
- It doesn't download files
- It has minimal the pre-flight, post-flight scripts that are run.

The package download is handled by either the update-engine (and its line of control), or by scp command. The lack of dependency check is a benefit, as its hard to maintain, and it is rarely used correctly: maintainers tend to choose a dependency of "the latest version" (as of when the package was), negating its use.

### 9.3.3 Documentation

---

The documentation of the tool is included as part of it's tgz. This is a quick overview.

When a package is installed it creates another package taking a snapshot of those files already there. When the package is uninstalled this 2nd package is used to replace the newer files with the older ones. It doesn't delete any files that were added since or by the first package, so some extra stuff can accumulate, but that is far safer.

Creating a package. To create a package, lets call it demo, requires setting up the files sytem with the files, and the package manifest. The manifest says, among other things:

1. The package name, version, and other helpful paperwork info.
2. where to get the files from locally, and where they should be placed into filesystem deployed when deployed on a Vector.
3. The path to any files that should be modified, and how. This is used to change the reported version string.
4. The permissions to set the files to

I've attached a really simple demo to demonstrate. To create a package unzip them, and then:

```
./vector-pkg.py create -pkg=demo
```

That will create .vpkg file — a gzip'd tar file with a specific layout. From here everything has to be on a Vector.

Installation. To install the vpkg:

```
./vector-pkg.py install -pkg=demo-1.vpkg
```

Uninstall. To uninstall the vpkg later

```
./vector-pkg.py uninstall -pkg=demo-1
```

---

## 9.3.4 Cavaets

---

### 9.3.5 Status

Not tested by others yet. Once the bugs are shaken out, the update-engine can be tweaked. When the update-engine gets a URL with ".vpkg" (such as from the BLE app) at the end, it downloads it, and then pass it to the package manager.

## 9.4 VEP3 - Developer configurations for robot

---

**Summary:** Change robot configurations for

This is a stub proposal for a VPKG with many common configuration settings for a Developer-tinkering bots.

- configure many the servers to use to main production server
- configure servers to use local servers (logging)
- Customize: CPU, Heat, Display settings

Not sure if these can be downloaded via Bluetooth LE

- server configuration
- local preferences

## 9.5 VEP4 - Logging

---

**Summary:** Changes to the logging scripts, configuration to local servers. This is to modify the servers to use for the logging, crash dumps, and similar. Events/logs will no longer be sent to AWS, or backtrace.io.

**Authors:** Randall Maas

This a draft proposal (to be filled in) on how to modify Vector config files and scripts to send logging and crash dumps to a server of our choosing.

- Logging
- Trace information
- Server
- Settings
- DAS optin/optout

Replace /anki/bin/vic-log-upload - moving aside, /anki/bin/vic-log-upload since it just does AWS, S3:// - put in something that can contact our local server

Files:

- server\_config.json
- log uploader
